Improvements

**Improved options for existing future bookings when assigning rooms**

INX SAM users will now be presented with a new third option of **Continue & Move all future bookings** while conducting a permanent room assignment and moving others from a room. The options are:

- *Click **Continue & Split** to split the current occupancy booking.* This will move the future occupants and create split bookings.
- *Click **Continue & Do not Split** to only move bookings after the current occupant departs.* This will not move the warning booking but will move any booking future bookings without splitting them.
- *Click **Continue & Move all future bookings** to move all existing future room occupants (excluding room owners) into a new room.* This will move the warning booking for the whole duration and any other occupants' future bookings without splitting them and won't create a split booking. [#43363]
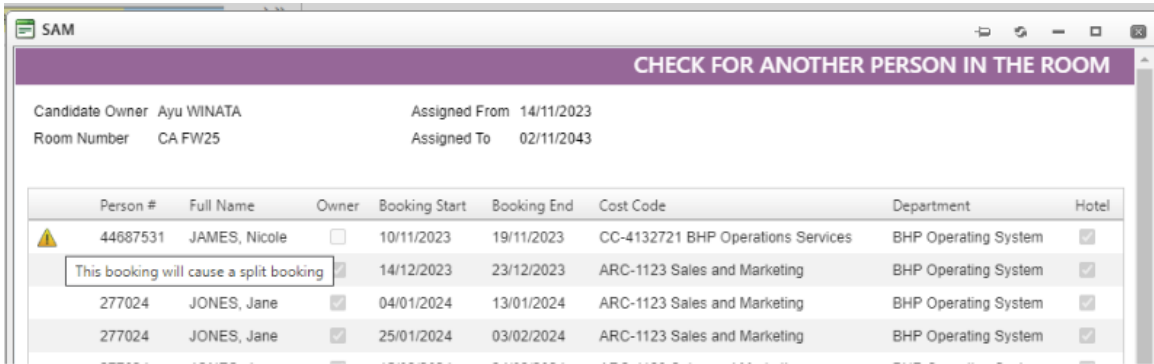

Before

Confirm Split Booking

Remove others from room will cause their bookings split across rooms.

Click **Continue & Split** to split the current occupancy booking
Click **Continue & Do not Split** to only move bookings after the current occupant departs
Click **Cancel** to return to the intruder search.

⊘ Cancel   ✔ Continue & Split   ✔ Continue & Do not Split

After

Confirm Split Booking

Remove others from room will cause their bookings split across rooms.

Click **Continue & Split** to split the current occupancy booking
Click **Continue & Do not Split** to only move bookings after the current occupant departs
Click **Continue & Move all future bookings** to move all existing future room occupants (excluding room owners) into a new room
Click **Cancel** to return to the intruder search.

⊘ Cancel   ✔ Continue & Split   ✔ Continue & Do not Split   ✔ Continue & Move all future bookings

Protecting people & planet

Below demonstrates each option and how INX SAM will behave.

You will get these options when you see the icon ⚠ [This booking will cause a split booking]

Room assignment date is in the future and the room assignment date is during an existing booking for Nicole James, therefore will cause a split booking.

Option 1 - **Continue & Split** - will move and split Nicole James booking, and will split any future bookings if no rooms are available for the whole booking.
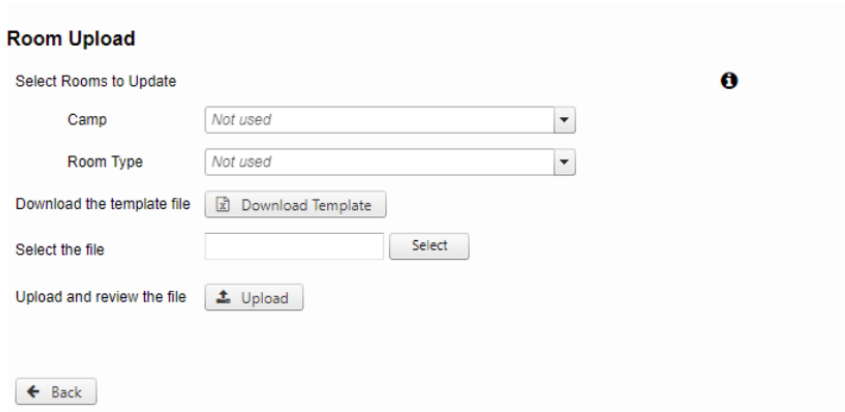

Option 2 - **Continue & Do not Split** - will not move Nicole James booking, however will move all future bookings without creating any split bookings

Option 3 - **Continue & Move all future bookings** - Will move and not split Nicole James booking to a new room available for the whole time and any future bookings

Facilitate bulk room creations with empty templates

We have improved the INX SAM room upload page to now allow an empty template to be downloaded to facilitate bulk creation of new rooms. An INX SAM user will also see updated selection options when updating existing rooms.

Before

**Room Upload**

Select Rooms to Update

Camp	Not used ▼
Room Type	Not used ▼

Download the template file   📄 Download Template

Select the file   [_____]   Select

Upload and review the file   ⬆ Upload

← Back

After

Room Upload

1. To add new rooms - Download the empty template

   📄 Download Empty Template

2. To update existing rooms - Select the Camp and Room Type for the rooms you want to update

   Select Rooms to Update

Camp	All Camps ▼
Room Type	All Room Types ▼

   Download the template file   📄 Download Template

3. Select the file   [_____]   Select

4. Upload and review the file   ⬆ Upload

Effectively manage bookings to multiple locations

In the event where you have a traveller booked to Location A, and you create an additional booking within the original timeframe to Location B, INX SAM Suite will create an INT (Internal) transport automatically, in different booking scenarios.

A new SAM parameter has been created, named "InsertInternalDrivesAutomatically", to help manage the consistency of how bookings are made to multiple locations.

When the parameter is set to the default state of "Y" (therefore keeping the existing functionality), the system will behave as follows:

- Single Booking made in SAM, the booking is successful and INT transports are created
- Multiple Bookings made in SAM, bookings are successful and INT transports are created
- Site Travel document in Workflow, the booking is successful and INT transports are created
- Group Booking made in SAM, the booking is NOT allowed
- Folio document in Workflow, the booking is NOT allowed

To have a consistent set of behaviour when the parameter is set to "N", the system will behave as follows:

- Single Booking made in SAM, the booking is not successful and INT transports are NOT created
- Multiple Bookings made in SAM, bookings are not successful and INT transports are NOT created
- Site Travel document in Workflow, the booking is not successful and INT transports are NOT created
- Group Booking made in SAM, the booking is not successful and INT transports are NOT created
- Folio document in Workflow, the booking is not successful and INT transports are NOT created [#34667]

Validate ownership of Folio Future Rooms

When a final approver processes a Folio document, we have improved the room validation on the processing tab for a future room assignment. [#35496]

Fixes

Group Booking parameter update

When the parameter **CleanUpExpiredStartDateGroupBookingMode** is set to Release, the Night Audit now releases rooms at day -1 from the start date. [#49667]

Clearer display for Active Transports

In INX SAM, we have successfully removed the duplicate active transport records. [#48933, 49225]

Night Audit optimiser update

We have applied a fix to the Night Audit for when people were moved into rooms for a future date, which were already assigned a future room ownership for someone else. [#44996]

Attachment icon on Folio documents

Attachments are now showing for the Workflow requestor when they edit the transport. [#45287]

Improved handling for shift status changes

An incorrect error message has been removed when making shift status changes on a Folio Workflow Document. [#39884, 40685, 36885]

Accurate reporting on location filter

We have resolved an issue in **SRF274 Arrival Departure By Location**, where filtering the report data by Location only reported on waitlisted Arrival flights, instead of both Arrival and Departure flights from that location. [#37568]

Handling bookings with different locations

When a booking was created in INX SAM, where the arrival destination and the camp were at different locations and the manual selection of a room booking was not successful. We have applied this fix to when the INX SAM parameters 'AutomaticallyPickRoom' was set to N and 'AllowBookingToOtherLocation' was set to 'Y'. [#37110]

Completion Date behaviour corrected

The completion date remains correct after a Folio remove document is processed. [#31465]
