Fixes	5
Workforce Kiosk App - V4.1.11	6

X New features

Workflow bookings now prioritise clean rooms made for the same day

When SAM is configured with the parameters “AutomaticallyPickRoom” and “UseAdvancedCleanDetails” set to Y, a workflow document will now prioritise and return available rooms marked as clean for new bookings made for the same day (i.e. today)—enabling greater flexibility and precision in your room assignments.

[Canny]

This new feature will operate as follows:

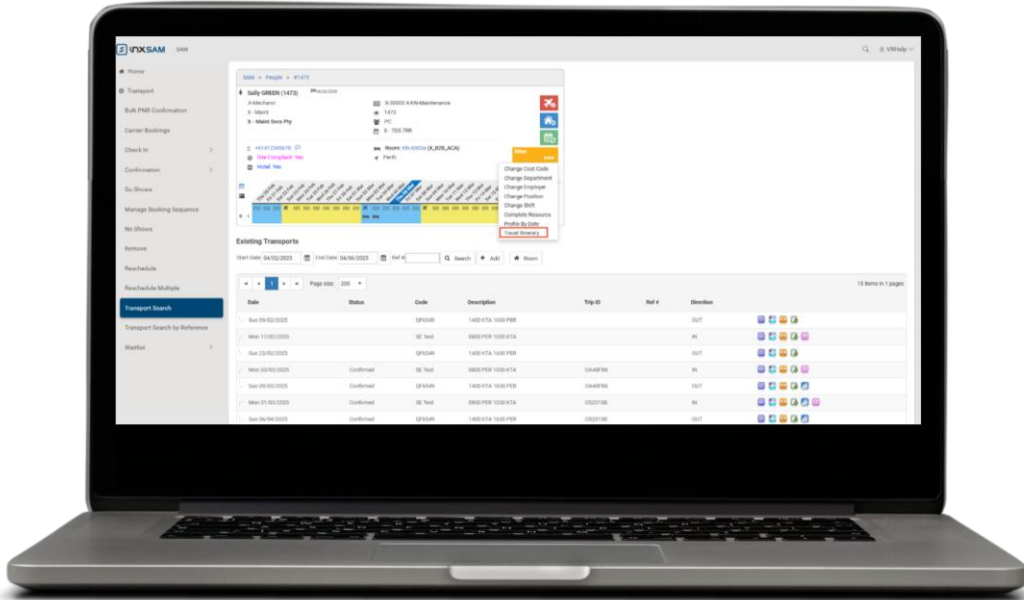

- The system first searches for clean rooms linked to the traveller’s profile.
- If no clean rooms are found, it searches for clean rooms based on the fill order configuration.
- If no clean rooms are available for today, the system will default to any available room, maintaining the previous functionality.

X Improvements

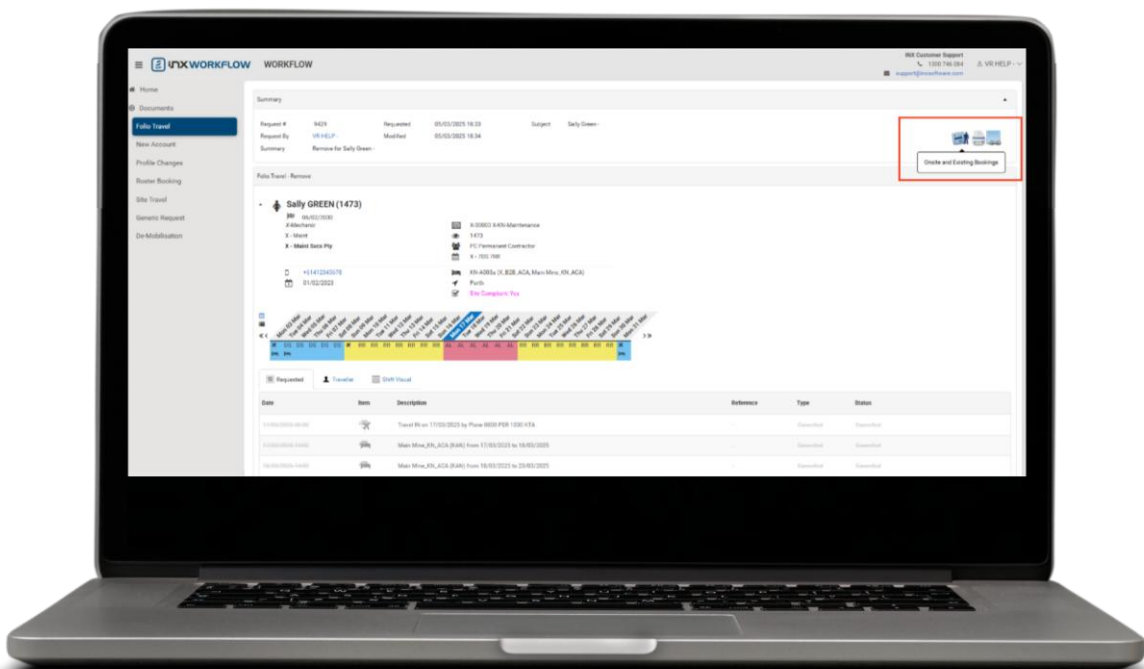

Easier itinerary generation with itinerary link in the Profile V card

The travel itinerary link has been reinstated in the Profile V Card in INX SAM, enabling users to easily generate a travel itinerary directly from the traveller's profile. [#73047]

Completed workflow folio documents no longer show as pending

To enable greater clarity of your completed workflow document, they will no longer appear as pending requests in the **OnSiteAndExistingBooking** popup within a folio document. [#71777]

Fixes

Roster bookings align with flight clusters

Roster bookings now account for flight clusters, ensuring the right flights are selected when processing a booking. [#73404]

Improved roster booking function when locating available rooms

We have fixed an issue where roster bookings failed to process despite available rooms. The system now correctly locates available rooms, ensuring seamless roster bookings. [#72674, 72826]

Enhanced validation of mobile phone numbers

We have fixed an issue that prevented users from saving valid mobile numbers in traveller profiles. The external library has been updated to the latest version in SAM and Workflow, ensuring all valid mobile phone numbers can now be successfully saved. [#72656, 73796]

Reduced site errors in B2B Matchmaker

The B2B Matchmaker now functions smoothly, allowing users to enter search criteria without site errors. [#72537,73006]

SRF163 report accurately displays departure date

To help enable reliable data, the SRF163 Arrival Departure 2 report now accurately displays the next departure date, including for inbound transport with an INT multisector flight. [#72509]
[#72509]

Improved SRF149 report for more accurate reporting

SRF149 Camp Arrivals Departures Date Range now runs successfully, enabling accurate and accessible reporting. [#71417]

SRF173 report accurately reflects roster bookings

The Reason column in the SRF173 Manifest report will now correctly indicate when a booking was made through a roster booking, ensuring greater accuracy and clarity in your reporting. [#70278]

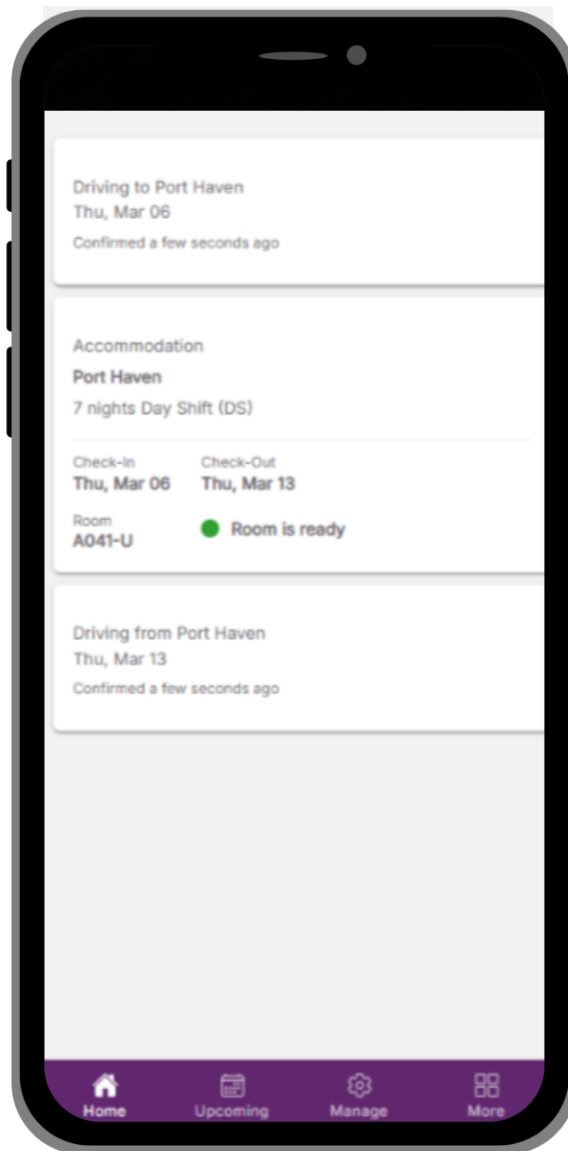

X

X Workforce Kiosk App - V4.1.11

New feature

New room readiness display

When the SAM parameters “UseAdvancedCleanDetails” and “AdvancedCleanDetailEnabled” are set to Y, your travellers will be able to see the readiness of their room on the day of their arrival. [Canny]

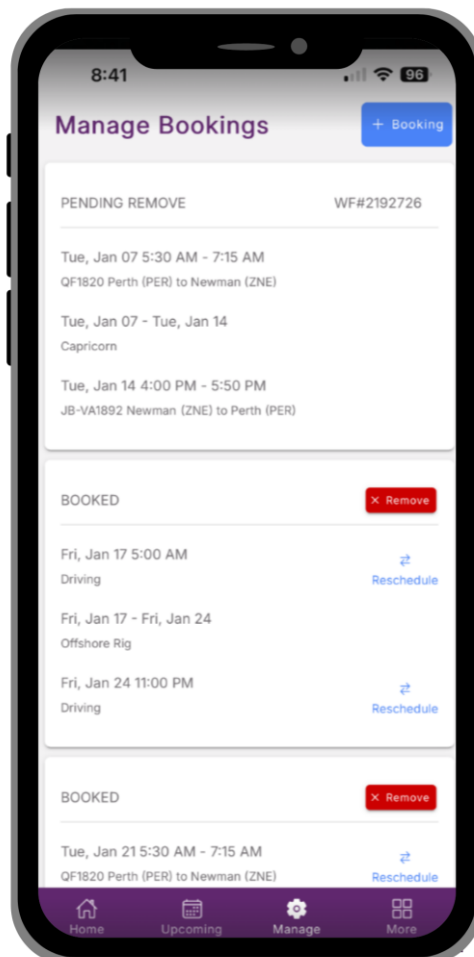

X Improvements

New maintenance message popup displays

To enable better awareness and ensure minimal disruption, our Workforce Kiosk app will display maintenance messages as a banner in the app to alert you when the app may be unavailable, in advance, due to planned maintenance.

Workflow request numbers are now visible in Workforce Kiosk app

When a booking request is submitted using the Manage Bookings feature, you will now see the associated workflow request number. This ensures confirmation that the request has been successfully created in the Workflow system and simplifies follow-ups for any related queries.

x

x Fixes

Easily manage booking shift statuses

The manage booking feature now displays only active shift statuses, making it easier for users to request changes accurately.
