# INX SAM SUITE 6.3.34

VERSION RELEASE NOTES

Date: 3 May 2023

## Contents

Highlights .....	3
New features .....	4
Improvements .....	5
Fixes.....	6

## Highlights

We are pleased to announce our newly developed version of group bookings. This is a new set of new features and improvements delivered over two releases, versions 6.3.33 and 6.3.34.

The following new features and improvements were delivered as part of your 6.3.34 release:

- The Group Bookings page includes a new column named “Requested # of Rooms”. This enables the user to capture the initial accommodation requirements and will help visualise the difference in requested rooms, reserved rooms and confirmed rooms.
- During the Group Bookings process new confirmation messages have been added so users can track their progress when adding rooms, transports and bookings.
- The location of the finalise button has been relocated to the bottom of the page.
- The cost code field is now editable in the Group Bookings page post the creation of a group booking.

The following new features and improvements were delivered as part of your 6.3.33 release:

- SAM users can now create multiple Group Bookings via a new import functionality using an Excel template.
- In the “Group Bookings Details” page, sections are now displayed in the order you need to complete them.
- When finalising a Group Booking, the pop-up message has been updated to say “All reserved transports and reserved rooms will be released. Are you sure you want to continue?”
- When creating a group booking, all mandatory fields are now displayed with an asterisk (\*).

## New features

INX SAM users are now able to move all future bookings from a room, from the page SAM | Bookings | Search | By Room - Search Room Number. Previously, users could only use this feature from within a traveller's profile, when permanently assigning a room.

In Workflow, as a final approver of a Folio document, the Update SAM Profile button is now visible for the final approver to action any required updates to the SAM profile from the workflow document.

## Improvements

Improvements have been made to the following:

- In SAM, on the Rooms | Accommodation Arrivals page, a user is now able to cancel an arrival and mark them as a no show. This will enable that arrival to display on **SRF308 Accommodation Discrepancy** with the newly created status of No Show (Cancelled). [#35612]
- In SAM, on the Rooms | Accommodation Arrivals page, a user can now mark an arrival as a Go Show, when using the Go Show link to reschedule a future booking. This arrival will now display on **SRF308 Accommodation Discrepancy** as a Go Show, once that arrival is checked in.

## Fixes

Fixes have been applied to the following:

- In SAM, where the night audit was incorrectly cancelling a required cleans. [#37694]
- Cancelled cleans were still showing as the Last Clean Date on the Room Clean Detail page, in SAM, and on **SRF324 Rooms Not Cleaned In Last X Days**. [#35808]
- In SAM, where a room types with “AutomaticallyPickRoom” set to N, were still being automatically picked. [#35757]
- In SAM, on the Accommodation Arrivals page where an arrival was displayed as already checked in prior to a SAM user selecting the check in function for that arrival date. [#39823]
- In Workflow, on a folio document when the reference number was incorrectly duplicated in a reschedule request. [#40712]
- In Workflow, on a folio document, an incorrect waitlist was displayed for the final approver after the requestor had edited the request. [#37958]
- In Workflow, where the action by date was not correctly updating if changes were made to the first affected travel date before submission of that document. [#33915]
- In Workflow, when submitting a roster request for a new profile, the roster preview would not display. [#36577]
- In Workflow, on the My Profile page, users were not able to update a field within their profile. [#38101]
- **SRF326 Workflow Multi Period KPI** was not able to be run successfully, due to an unsupported date format.
- **SRF175 Roster To Excel** was not displaying data for completed profiles. [#37186]
- In Workforce Reporting, when a user removes multiple scheduled reports, all the selected reports were not removed. [#34311]
