INX SAM Suite

Version 6.3.38 Release Notes

Date: 22 August 2023

Contents

New features	3
Improvements	4
Fixes.....	5

New features

In Workflow, a new system parameter has been created “ForceRequestorToSelectShiftStatus”.

The parameter enables the user to choose whether requestors are required to enter a room status for a new booking on Folio and Site Travel documents.

When set to Y, the shift status field is empty, and the requestor is required enter a value.

When set to N, the shift status will be set to the default values set in SAM on the Room Status page. **[Canny]**

In SAM, on the page SAM | Admin | Accommodation | Room Types, a new column has been added to display the number of active rooms within each room type. **[Canny]**

Improvements

Improvements have been made to the following:

- In Workflow, a new parameter has been added to the Training Document called “ActionDays” to allow the configuration of the number of days away for a Training request. [#45354]
- In Workflow, when creating a new user, all mandatory fields are now marked with an asterisk prior to the user entering data.
- In Workforce Reporting, when adding a new user all mandatory fields are now displayed with an asterisk prior to the user entering data.
- **SRF304 SAM No Shows** now has the new report criteria /splitflightcode, where the report can split flights either onto separate tabs or separate files. [Canny]
- **SRF287 Resource Transport Audit**, a new available item ReportData.BookingNote has been added to the '/of' parameter in the report criteria. [Canny]
- **SRF195 SAM Profile Master Data** now includes report criteria /rids to allow a user to report on resources and imports a list of specific resources. [Canny]
- In SAM, the character limit for a username has been increased to 50 characters.
- In SAM, when creating a new user, all mandatory fields are marked with an asterisk prior to the user entering data.
- In SAM, when saving a new profile, an empty required field will no longer be displayed with a double asterisk. The asterisk will turn red, until the field has a value entered.
- In SAM, UI improvements have been made to the parameter CleanUpExpiredGroupBookingMode, for better understanding of the parameter and the available options.

Before

Category	Name	Description	Value	Minimum Level	Action
System	CleanUpExpiredGroupBookingMode	Allow NightAudit to clean up reserved transports and rooms, but unassigned, under Group Bookings and Event Management with Start Date that has expired.	Release	System	Edit

Available RemoveA

Mode "Release": Release reserved transports and rooms, but unassigned, under Group Bookings and Event Management with Start Date that has expired. Leave all confirmed items and keep the master record.
 Mode "RemoveGB": Do the Release and if there is none left after the Release, then the Group Booking will be removed as well.
 Mode "RemoveAll": Do the Release, then the RemoveGB, and if there is none left after the Remove, then the related Event Management record will be removed as well.
 Mode "Disabled": Skip all, no clean up.
 Default to empty or "Release".

After

Category	Name	Description	Value	Minimum Level	Action
System	CleanUpExpiredGroupBookingMode	This parameter controls the extent to which the Night Audit automatically cleans up both group bookings and events in SAM.	Release	System	Edit

Parameter

Name	CleanUpExpiredGroupBookingMode
Description	This parameter controls how the system automatically cleans up both group bookings and events in SAM.
Minimum Level	System
Parameter Values	Disabled, Release, RemoveGB, RemoveAll
Mode Descriptions	<input type="radio"/> Disabled No changes are made to completed group bookings or events.
	<input checked="" type="radio"/> Release Release reserved transport and rooms, from group bookings and event management, after the Start Date has expired. Note, this does not include confirmed bookings.
	<input type="radio"/> RemoveGB Release the entire group booking record, if there are no confirmed bookings, after the Start Date has expired.
	<input type="radio"/> RemoveAll Release both the entire group booking and event management record, if there are no confirmed bookings, after the start date has expired.

Fixes

Fixes have been applied to the following:

- In Workflow, where the profile summary utilised different source data between the request and final approvals stages. [#45716]
- In SAM, fixed an issue with the error messaging, when creating a multisector. [#45496]
- In Workflow (Site Travel document): The 'no show' tick box was incorrectly not checked on a transport when that transport is marked as a no show in SAM. [#45306]
- In SAM and Workflow, when a person was being extended on site, and the current booking was split, the system was trying to extend the booking into the incorrect room. [#41791]
- In SAM, the default flight ranking was not being applied when saving a person profile. [#43871, 39214, 39427]
- In SAM, a user was unable to successfully import new Employers via the Admin > Bulk Processing > Employer menu. [#41354]
- A Folio document now validates confirmed room bookings against SAM. [#40015]
- In Workflow, a folio document was not able to be submitted when a profile field has been set up as a checkbox that is configured as "Workflow required". The fix has resulted in making the check box profile field not able to be made required.
- In SAM, on the Bulk Room Update page, inactive cleaning runs were still displayed in the drop-down list when bulk updating cleaning runs for rooms. [#30765]
